

**WELCOME  
TO THE WORLD OF GLASS  
AND GLASS CONTAINERS**

## BEGINNINGS OF GLASS

**The origins of glass production date back to ancient times. It originated around 3500-4000 BCE in Mesopotamia and Egypt, where it was initially a rare, opaque, and expensive material used for beads, amulets, and small vessels.**

**A breakthrough came in Roman times (1st century BCE), when the technique of glassblowing made glass cheaper, more transparent, and more common.**

## WIDESPREAD USE OF GLASS

**We use glass every day in most households and beyond. Its advantage is that it can be reused multiple times, making it environmentally friendly.**

## GLASS IS BACK IN FASHION

## INTERESTING FACTS

- ▶ There was a time when glass was commonly replaced by plastic, but due to the **environmental friendliness of glass**, we are increasingly returning to all types of glass containers and packaging.
- ▶ According to the latest reports on glass waste processing in Europe, over **76% of glass packaging is recycled in the EU**. Glass is undoubtedly the best example of a material that works well in a closed-loop recycling process.
- ▶ Glass - one of the best materials to reuse - **GLASS UPCYCLING**
